- 8 Head unit security screws
- 2 Torx Allen key (for the security screws)
- 2 mount arm/pole
- 2 4ft iPad power cables with 90 degree iPad connector
- 2 base plate
- 2 plastic base housing and cover
- 8 base screws (4 short, 4 long)
- 4 base security screws, (will not be needed in most cases)
- 2 3ft Power Cords
- 2 iPad Air tablets
- 2 iPad Power adapters
- 1 set of assembly instructions
- 2 sets of banner arm + mount hardware
 - 4 banner arms | 4 U Clips | 8 U Clip screws
 - 2 U clip attachment screws for Mount arm/pole)
- 2 Banners

Note: The orange keys pictured on page 9 of the [assembly instructions](#) don't work and are NOT shipped.

Baggies/covers for each part are also included, good idea to keep them for screws and other small items

IMPORTANT: When re-packing kiosks for transport, place the iPad screen **FACE DOWN** to the foam to protect the screen from damage.

If available, one zip tie through the middle latch when shipping is recommended.

WiFi Notes

Ports 80, 443, 2195, 2196 & 5223 need to be open on the WiFi network for the kiosk to operate correctly. *Most network will have 80 and 443 but the others may vary.*

If you start the kiosk and got a white screen, this is a sign of a lost network connection. Contact Alan to get an unlock code and the swipe gesture to reach and reset iPad settings for the network connection.

Power and sleep mode

The devices are locked into kiosk mode, and can only be powered down if unlocked them from the management platform at SLK.

Use the power button to place them into sleep mode, otherwise they will not sleep.

By design, there is no access to the "iPad" home button physically or from the software.

Camera

The front-facing camera lens is visible through the bezel, but does not take pictures. It looks for objects blocking the camera light to collect analytics (an indication of people reading/using the kiosk).
